

LexMate Case Management System

Complete Non-Technical System Documentation

1. Introduction

What is LexMate?

LexMate is a complete **legal practice and case management system** designed for law firms, notaries, legal consultants, and legal service providers.

The platform helps legal professionals manage:

- Clients
- Legal cases
- Appointments
- Court dates
- Legal documents
- Invoices and payments
- Lawyer assignments
- Tasks
- Client communication

The system is web-based, meaning users can access it through a browser from a computer or laptop.

2. Purpose of the System

The goal of LexMate is to centralize all legal operations into one secure platform.

Instead of managing information through:

- paper files,
- spreadsheets,
- WhatsApp messages,
- emails,

- or multiple software tools,

LexMate allows everything to be managed in a single organized environment.

3. Main Types of Users

The system contains **three different user portals**, each with different permissions and access levels.

4. Admin / Staff Portal

Who Uses This?

- Law firm owners
- Administrators
- Office staff
- Secretaries
- Operations teams

This is the **main management area** of the system.

Main Features Available to Admins

Dashboard

The dashboard gives a quick overview of the business.

Admins can see:

- Total number of legal cases
- Active cases
- Closed cases
- Upcoming appointments
- Pending appointments
- Recent activities
- New clients

- Financial summaries

This helps management monitor daily operations easily.

5. Client Management

What It Does

The system allows admins to create and manage client profiles.

Each client profile can include:

- Full name
- Phone number
- Email address
- Address
- Notes
- Linked legal cases

Client Portal Access

Clients can optionally receive their own login credentials.

With client access, they can:

- View their cases
- Check appointments
- See invoices
- Track payments
- Follow court dates

This improves transparency and reduces manual communication.

6. Case Management

Core Functionality

Case management is the heart of the platform.

Admins can create legal cases and assign them to lawyers.

Information Stored in a Case

Each case can contain:

General Information

- Case title
- Description
- Category
- Priority level
- Current status

Financial Information

- Estimated legal fees
- Services provided
- Payments received
- Remaining balance

Timeline Information

- Start date
- Expected completion date
- Court dates
- Case stages

Team Assignment

- Assigned lawyers
- Primary lawyer

Case Statuses

Cases can move through different stages such as:

- New
- Active
- Pending
- In Progress
- Completed
- Closed

This allows firms to monitor case progress clearly.

7. Lawyer Management

What the System Supports

The platform includes a lawyer directory.

Admins can:

- Add lawyers
- Edit lawyer information
- Assign lawyers to cases
- Manage lawyer schedules
- Track lawyer workload

Lawyer Portal

Lawyers receive their own login portal.

Inside the lawyer portal, they can:

- View assigned cases
- Update tasks
- Manage appointments
- Track court dates
- View assigned clients

This separates lawyer workspaces from admin operations.

8. Appointment Management

Purpose

The appointment system helps coordinate meetings between:

- clients,
- lawyers,
- and legal staff.

Features

Admins and clients can:

- Create appointments
- Select lawyers
- Choose dates and times
- Link appointments to specific legal cases

Appointment Workflow

Lawyers can:

- Accept appointments
- Reject appointments

Appointment statuses include:

- Pending
- Accepted
- Rejected

9. Court Date Tracking

Purpose

The court tracking module helps legal teams manage hearings and court appearances.

Features

Users can:

- Add court dates
- Assign court locations
- Track hearing status
- Link court dates to cases

Benefits

This reduces the risk of:

- missed hearings,
- scheduling conflicts,
- and manual diary management.

10. Task Management

Purpose

Tasks help organize legal work internally.

Examples of Tasks

- Prepare legal documents
- Contact client
- Submit court filing
- Review contracts

- Follow up on payment

Features

Tasks can include:

- Assigned lawyer
- Due date
- Priority level
- Completion status

Lawyers can update task statuses themselves.

11. Document Management

Purpose

The system includes a centralized legal document repository.

Features

Admins can:

- Upload files
- Attach documents to cases
- Store PDFs and Word documents
- Organize legal records

Supported File Types

Examples:

- PDF
- DOC
- DOCX
- Images

Document Templates

The system also supports reusable templates.

Examples:

- Contracts
- Legal notices
- Engagement letters
- Standard forms

This reduces repetitive work.

12. Financial Management

Invoices

Admins can generate invoices for legal services.

Invoices can contain:

- Service descriptions
- Amounts
- Dates
- Payment status

Payments

Payments can be recorded manually.

Information stored includes:

- Payment method
- Reference number
- Payment date
- Amount paid

Financial Summary

The system automatically calculates:

- Total fees
- Amount paid
- Outstanding balances

This gives management financial visibility.

13. Contracts & Agreements

The platform can generate printable contracts related to legal cases.

Examples:

- Client engagement agreements
- Service contracts
- Fee agreements

These can be downloaded or printed.

14. Activity Timeline / Audit Trail

What It Does

The system records activities performed inside each case.

Examples:

- Case updates
- Payments added
- Documents uploaded
- Comments posted
- Appointments scheduled

Benefits

This creates a full historical timeline for accountability and tracking.

15. Client Portal

Purpose

The client portal improves communication with clients.

Clients Can View

- Their legal cases
- Case progress
- Appointments
- Court dates
- Payments
- Invoices

Benefits

This reduces:

- unnecessary phone calls,
- repeated email requests,
- and administrative workload.

16. Lawyer Portal

Purpose

The lawyer portal gives lawyers a dedicated workspace.

Lawyers Can

- View assigned cases
- Manage tasks

- Accept/reject appointments
- Track hearings
- Review client information

17. System Settings

The system includes basic configuration settings.

Current Available Settings

Currency Settings

Supported currencies include:

- USD
- EUR
- MUR

Branding Settings

Some branding options exist in the interface, including:

- business name,
- logo,
- and display settings.

However, some branding features are still partially implemented.

18. AI Chatbot (Placeholder)

The platform includes a chatbot interface.

At present:

- it is mostly a placeholder/demo feature,
- and does not yet contain real AI functionality.

This can later be integrated with:

- ChatGPT,
- AI assistants,
- or legal automation tools.

19. Security & Access Control

Existing Security

The platform includes:

- password-based login,
- separate user portals,
- role-based access.

Passwords are designed to be encrypted.

Important Limitation

Some admin pages currently require additional security improvements.

This means:

- certain pages may not fully validate user permissions,
- and access control should be strengthened before large-scale deployment.

Recommended improvements include:

- centralized authentication,
- permission management,
- and stronger session protection.

20. File Storage

Uploaded documents are stored securely inside server folders.

Examples:

- legal documents,
- client files,
- court attachments,
- contracts.

Folders are automatically created when needed.

21. Current State of the System

Fully Working Features

The following areas are already operational:

- ✓ Multi-user login system
- ✓ Client management
- ✓ Case management
- ✓ Lawyer assignment
- ✓ Appointments
- ✓ Court tracking
- ✓ Task management
- ✓ Documents & uploads
- ✓ Invoices & payments
- ✓ Financial summaries
- ✓ Client portal
- ✓ Lawyer portal
- ✓ Event tracking

Partially Completed / Demo Features

The following areas are currently basic or incomplete:

- △ Reports section
- △ Staff directory

- △ AI chatbot backend
- △ Some branding settings
- △ Certain demo pages

22. Recommended Future Improvements

To make the platform enterprise-ready, future improvements could include:

- Stronger security
- Mobile responsiveness optimization
- Email notifications
- SMS reminders
- Calendar integrations
- Online payment gateways
- AI legal assistant
- Advanced reporting
- Multi-branch support
- Role permission customization
- Electronic signatures
- Client messaging system
- Cloud backup system

24. Overall Summary

LexMate is a comprehensive legal operations platform designed to simplify and centralize the management of legal services.

The system already provides:

- case management,
- appointment scheduling,
- lawyer collaboration,
- financial tracking,
- document management,
- and client communication tools.

It is suitable for:

- law firms,

- notary offices,
- legal consultants,
- and legal service organizations looking to digitize operations.

The platform combines operational management, financial management, and legal workflow tracking into one centralized environment.
